Research Title: Social Adjustment and its effect on academic achievement: An Applied study of sample of trainees from industrial secondary institute in Jeddah.

Description: This study aimed at knowing the effect of social compatibility on learning as well as determining some educational and familial variables in order to know the students who are compatible and incompatible with the educational environment. It aimed also at knowing the educational and social features of the individuals of the sample and determining the problems which face the student after affiliating to the institute and their effects of learning. In addition, the study aimed at determining some of the institute’s scientific and educational elements and their relationship with social compatibility. The study was applied on the students of the Industrial Secondary Institute in Jeddah. The researcher used social survey as a main methodology. Field data was collected by means of questionnaire and interview. The sample consisted of 817 students of all specialties (electricity, cars, metal constructions, electronics and general mechanics) following the method of class sample. The study concluded that 92% of the researched sample reported that their department and specialty were compatible with their interests and ambitions. 91% reported that they are compatible with their specialty at the institute. Moreover, it was obvious that 82% of the researched students were in good relationships with their classmates within the educational environment. The study also concluded that there were a statistical signification relationship between the student’s specialty and his suffering from disputes or problems after joining the institute. It was demonstrated that those researched students who joined the institute to imitate their mates were more subjected to troubles and problems within the educational environment followed in order by those who joined the institute in response to their parents’ desires, those who joined the institute because of the presence of work opportunities after graduating, and finally those who joined the institute according to their own desire. All these results were added to other results concerning the objectives of the study.
