I. E. El-Hakim and J. D. Langdon: Unusual presentation of tuberculosis of the head and neck region. Report of three cases. Int. J. Oral Maxillofac. Surg. 1989; 18: 194-196.

Abstract. Three cases are reported in which the diagnosis of tuberculosis has only been made following surgery for suspected salivary gland tumour, sebaceous cyst and carotid body tumour. Surgery could have been avoided if tuberculosis had been considered in the initial differential diagnosis.

Key words: tuberculosis; lymph nodes.
